US-10-003-295-1

Sequence 1, Application US/10003295

Patent No. 6886187

Patent No. 6886187

FARTHLINFORMATION:
APPLICANT: GAN, Weiniu et al.
APPLICANT: GNAIN WILL ET AL.

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF

FILLE OF INVENTION: THEREOF

FILLE REFERENCE: CL001183DIV

CURRENT APPLICATION NUMBER: US/10/003,295

CURRENT FILING DATE: 2001-12-06

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FRASESEQ for Windows Version 4.0

SEQ ID NO 1

LENGTH: 2674

TYPE: DNA

ORGANISM: Homo Sapiens

Patent No. 6686187

Patent No. 6686187

GENERAL INFORMATION:

APPLICANT: GAN, Weiniu et al.

ITILE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CL001183DIV

CURRENT FILING DATE: 2001-12-06

NUMBER OF SEQ ID NO.3: 4

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO.3

LENGTH: 15297

TYPE: DNA

ORGANISM: Homo sapiens
                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

Patent No. 650093
                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
                COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Word Perfect 6.1 for Windows/MS-DOS
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/016,434
FILING DATE: HEREWITH
    CLASSIFICATION:
                                                                                                                                                                                                                                COUNTRY:

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPRT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                      1615

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Email: seqref@genoscope.cns.fr, Web: www.genoscope.cns.fr lst strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was dested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                968 bp mRNA linear ES BX359010 Homo sapiens PLACENTA COT 25-NORWALIZED Homo clone CS0DI051Y020 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODIO69AF11QP1&c=7663.f. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecor V sites of the pcWVSpORT 6 vector. Library was constructed by Life Technologies, a was normalized. Library was constructed by Life Technologies a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODIOO8ADO4NP1&c=7663.f. /note="Organ: skin; Vector: pOTB7; Site 1: XhoI; Site 2:
EcoRI; cDNA made by oligo-dT priming. Directionally cloned into EcoRI/XhoI sites using the following 5' adaptor: GGCACGAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript I RT (Life Technologies). Note: this is a NIH_MGC Library."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and Ecor V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a

RESULT 1

ABA94500 standard; cDNA; 2674 BP

ABA94500;

09-APR-2002 (first entry)

Human proto-oncogene tyrosine kinase encoding cDNA.

```
3'UTR
                                                                                                                                                                                                                         5'UTR
                                                                                                                                                                                                                                                                    Proto-oncogene tyrosine kinase; poTK; tumour; cytostatic; anti-leukemic; gene therapy; protein therapy; vaccine; enzymatic-inhibition; human; anti-kinase; ss.
       Nucleic acids encoding a proto-oncogene tyrosine kinase, useful for the prevention, diagnosis and treatment of e.g. leukemia and lung tumors.

                                                                                                                                                                                                                                  Location/Qualifiers
                                                            Beasley
```

```
CC The invention provides isolated nucleic acid sequences encoding a protococogene tyrosine kinase (poTK). The poTK polynucleotides and protein may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate poTK expression, such as lung and kidney tumours, compared with decreased expression, such as lung and kidney tumours, compared with decreased expression by rectifying mutations or deletions compared in a patient's genome that affect the activity of poTK by expressing compared in a patient poTK may be used as an antigen in the production of poTK. The encoded poTK may be used as an antigen in the production of poTK. CC The encoded poTK may be used as an antigen in the production of compared in a patient poTK and in assays to identify modulators of poTK. Expression and activity and as diagnostic agents cor detecting the presence of poTK antibodies and antagonists may be used to down regulate expression and activity and as diagnostic agents cor detecting the presence of poTK in samples. The present sequence cor represents a cDNA encoding the human poTK some potential sequence 2674 BB; 662 A; 767 C; 810 G; 435 T; 0 U; 0 Other; Best Local Similarity 100.0%; Score 2256; DB 6; Length 2674; Best Local Similarity 100.0%; Score 2256; DB 6; Length 2674; Matches 2256; Conservative 0; Mismatches 0; Indels 0; Gaps 0; Matches 2256; Conservative 0; Mismatches 0; Indels 0; Gaps 0; Matches 2256; Conservative 0; Mismatches 0; Indels 0; Gaps 0; Matches 2256; DB 6; Length 267AAATGCAG 60

New human kinase protein, useful for treating or diagnosing disorders associated with an absence of, inappropriate, or unwanted expression of the protein, e.g. inflammation or cancer, in drug screening assays and pharmacogenomics.

Claim 4 (b); Fig 1; 75pp; English.

The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CC peptides of the invention are useful in assays to determine the CC peptides of the invention are useful in assays to determine the CC peptides of the invention are useful in assays to determine the CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC are useful as probes, primers and chemical intermediates in biological cassays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, and in the identification CC therapeutic agents that modulate kinase protein activity in cells and CC tissues that express the protein. The protein of the invention may also be useful in gene therapy. The gene encoding the protein of the invention CC consecuted to human chromosome 15. The current sequence the human kinase encoding CDNA
